Methylene Blue  
Analysis

CUSTOMER NAME: Micor Corp.  
ADDRESS: 800 CLERMONT AVE. Bensalem, PA. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (<) 1.4 ng (micrograms) indicate archival quality, and greater than (>) 1.4 ng indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

| TEST<br>IDENT.                     | ACTUAL<br>CONCENTRATION | MEETS ANSI<br>STANDARD<br>( $<$ ) 1.4 mg | DOES NOT MEET<br>ANSI STANDARD<br>( $>$ ) 1.4 mg |

|                                    |                         |                                          |                                                  |
|                                    |                         |                                          |                                                  |
|                                    |                         |                                          |                                                  |
|                                    |                         |                                          |                                                  |

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI standard IT9.1-AS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 mg for residual thiosulfate.

A 4x4 grid of 16 color calibration patches, each with a numerical label. The labels are arranged in a 4x4 grid, with the top row containing 1, 2, 3, and 4, the second row 5, 6, 7, and 8, the third row 9, 10, 11, and 12, and the bottom row 13, 14, 15, and 16. The patches show a variety of colors and shades, including primary and secondary colors, skin tones, and grayscale steps.

MICROFILM CORP.

Methylene Blue  
Analysis

CUSTOMER NAME: MICOR Corp.  
ADDRESS: 800 CLERMONT AVE. BETHLEHEM, PA. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (1) 1.4 mg (micrograms) indicate archival quality, and greater than (2) 1.4 mg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

| TEST IDENT.                       | ACTUAL CONCENTRATION | MEETS ANSI STANDARD (< 1.4 mg) | DOES NOT MEET ANSI STANDARD (> 1.4 mg) |
|-----------------------------------|----------------------|--------------------------------|----------------------------------------|

|                                   |                      |                                |                                        |
|                                   |                      |                                |                                        |

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI standard 19.1-45: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 mg for residual thiosulfate.
